AmnioCore™ Surgical

Why Amniotic Tissue? Amniotic Tissue has been used clinically for over 100 years with more than 100 publications to date. Publications describe that the use of amniotic tissue has also been shown to have an inhibitory effect on a diverse panel of bacteria.

AmnioCore Surgical provides a reliable and versatile biologic covering option within a multitude of procedures.

AmnioCore™ is a dual-layer amniotic tissue allograft, which provides a safe, natural biologic barrier. AmnioCore Surgical delivers essential growth factors on a structural protein matrix, with superior handling properties. This allows for easy manipulation and results in a dependable, flexible allograft.

AmnioCore™ Sheet reduces scar tissue formation and modulates inflammation with natural barrier properties to enhance healing.

Ease of Use

Dehydrated for ease of use and application
Five year shelf life at ambient conditions, no special storage needed.
